ORIGIN AND DESTINATION STATISTICS

MAINLINE REVENUE PASSENGER TRAFFIC

1960 – 1962

PREPARED BY THE STATISTICS SECTION, ECONOMIC POLICY & RESEARCH BRANCH ON BEHALF OF THE AIR TRANSPORT BOARD

APRIL, 1961

LIBRARY
NOV 5 1971
UNIVERSITY OF TORONTO

AIR TRANSPORT BOARD
COMMISSION DES TRANSPORTS AÉRIENS
CANADA

FOREWORD

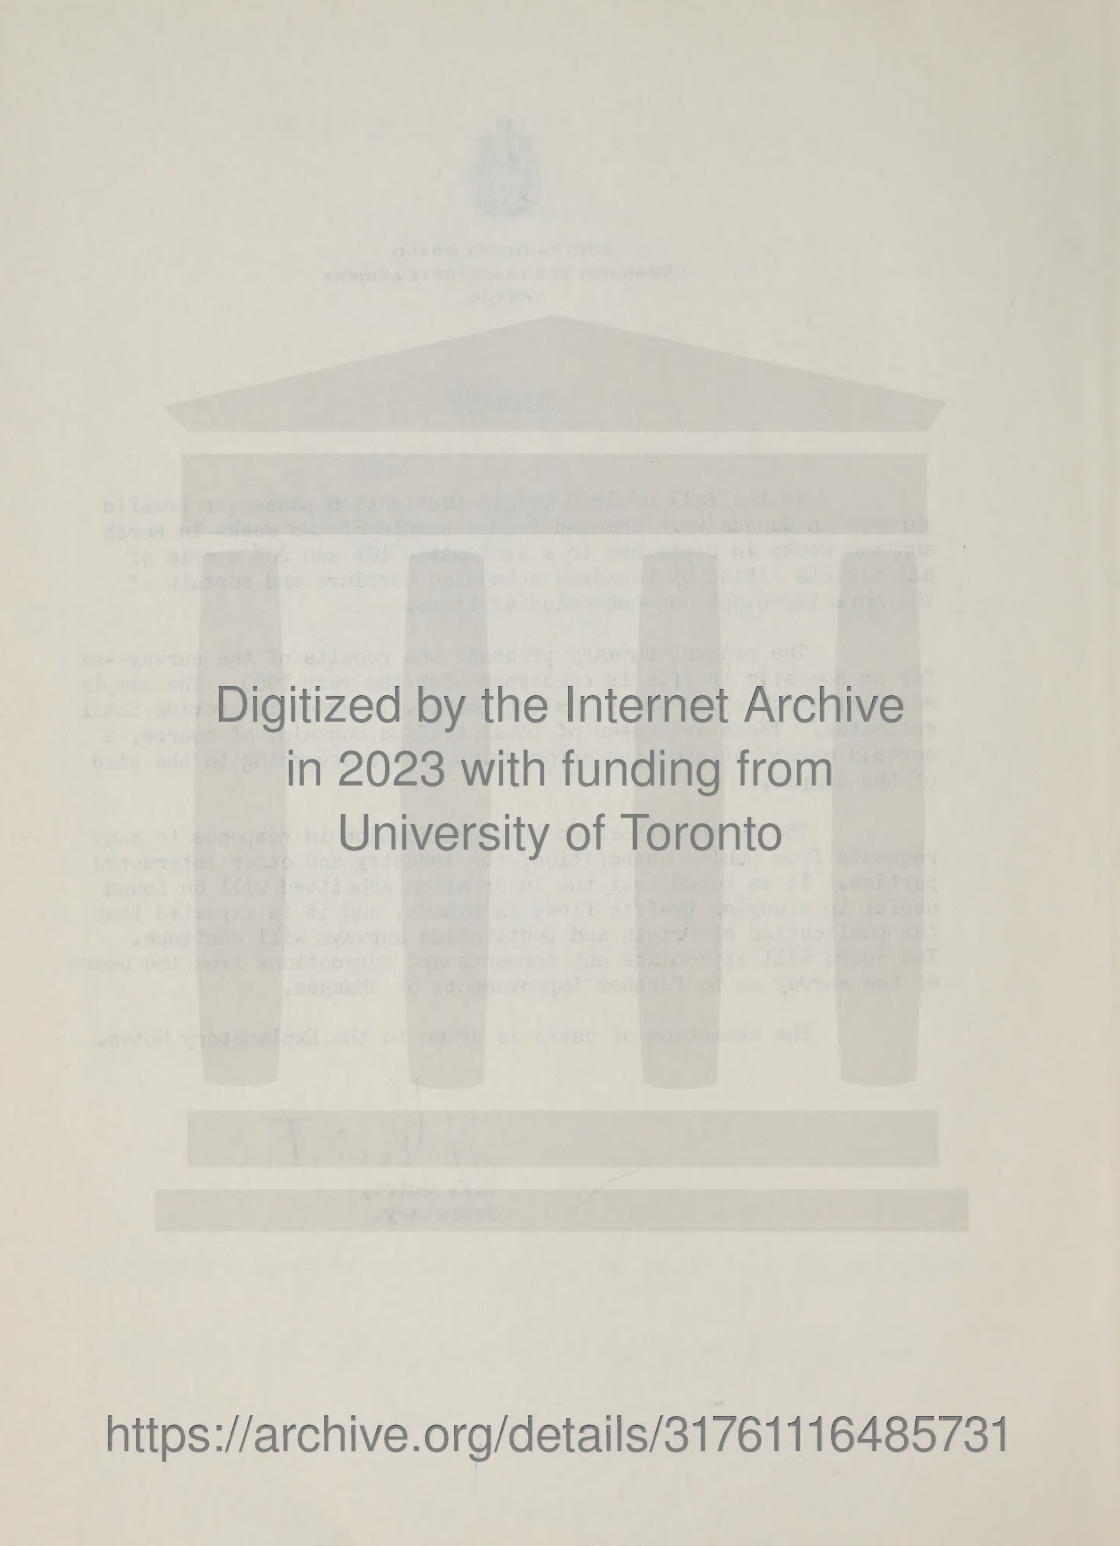

In the fall of 1959 Origin-Destination passenger traffic surveys in Canada were changed from a sample of two weeks in March and two weeks in September to a systematic 10% and 20% sample of all tickets lifted by Canadian scheduled carriers and certain of the more important non-scheduled airlines.

The present summary presents the results of the survey--as far as domestic traffic is concerned--for the year 1960. The sample was "inflated" by 10 and 5, as applicable, in order to provide total estimates. These estimates of total traffic contain, of course, a certain margin of sampling error which varies according to the size of the sample.

The Board authorized this publication in response to many requests from public authorities, the industry and other interested parties. It is hoped that the information submitted will be found useful in studying traffic flows in Canada, and it is expected that the publication of Origin and Destination surveys will continue. The Board will appreciate any comments and suggestions from the users of the survey as to further improvements or changes.

The attention of users is drawn to the Explanatory Notes.

D.F. Quirt,
Secretary.

EXPLANATORY NOTES

1. The present survey is based on a systematic sample of all tickets lifted by Canadian scheduled carriers, and Nordair Limited, Saskatchewan Government Airways and Wheeler Airlines.

2. Traffic carried on T.C.A.'s routes and C.P.A.'s Vancouver-Montreal route was reported on the basis of a 10% sample. All other traffic was reported on the basis of a 20% sample.

3. The information summarized in this survey was derived from the data entered on passenger tickets. First coupons of all the tickets lifted having as the last digit "0" or "0" and "5" had to be reported to the Board. This method is somewhat different (as to both size of sample and collection procedures) from the one adopted by the Civil Aeronautics Board in the United States, which collects domestic Origin-Destination Statistics on the basis of a 10% sample of tickets sold. The practical results of this difference in method are:

   (a) greater reliability of estimates of low traffic density city pairs are attained by the Canadian method.

   (b) total ticket cancellations are included in the C.A.B. surveys and excluded in the A.T.B. survey: therefore the method adopted in the U.S.A., as compared with the Canadian system, tends to overestimate traffic volumes.

4. The results have been derived from regular one-way and round trips as well as from "circle" and "open-jaw" trips broken into their main component portions, i.e. "going" and "returning" parts of the journey.*

---

* A "circle trip" is a return journey, of which the going and the returning portions are different; an "open-jaw trip" is a trip in which the distance between the trip's origin and its final destination is relatively small as compared with the most distant part of the journey; e.g. Ottawa-Noranda/Toronto-Ottawa is a "circle trip," and Ottawa-Vancouver-Montreal is an "open-jaw trip."

5. The method of presentation adopted here is as follows:

(i) Details as to routings and carrier participation have been omitted.

(ii) The data are arranged by stations, and are summarized in FROM and TO columns. Thus, for example, to find the number of passengers flying from Calgary to Vancouver one can use the Calgary page and then read the data entered on the Vancouver line in the FROM column; alternatively one can use the Vancouver page and read the data entered on the Calgary line in the TO column.

(iii) Stations are arranged in three parts:

PART I - Canadian Stations - Domestic Traffic (traffic between Canadian stations).

PART II - Canadian Stations - Canada - U.S. Traffic (traffic between Canadian stations and points in U.S.A.; T.C.A. terminal points only).

PART III - U.S. - Canada Traffic (traffic between U.S. terminals of T.C.A. and stations in Canada).

In addition a summary is provided of total traffic (domestic and trans-border) originating or terminating at Canadian stations.

6. Overseas trips, and domestic parts of overseas journeys have been excluded from this summary. No release of these data is contemplated.

7. Origin and Destination Statistics are collected under the authority of the Air Transport Board, and are processed by the Statistics Section, Economic Policy and Research Branch and the Data Processing Unit of the Department of Transport.

A limited number of copies of Origin and Destination Statistics, Mainline Scheduled Traffic Survey of Revenue Passengers 1955-1959 is available on request from the Secretary, Air Transport Board.

AVANT-PROPOS

Depuis l'automne 1959, la compilation des statistiques des points d'origine et de destination des passagers (trafic intérieur) est basée sur une méthode différente d'échantillonnage. Une compilation systématique au jour le jour à partir d'une échantillon d'environ 10% du nombre de passagers sur les routes à grand débit et 20% sur les autres remplace l'ancienne méthode d'échantillonnage basée sur le trafic de deux semaines dont l'une en mars et l'autre en septembre. Cette nouvelle façon de procéder devrait sensiblement améliorer la précision des estimations annuelles.

Les statistiques de 1960 ont été publiées en avril 1961. Des analyses et des recherches plus poussées sur les données de 1960 ont amené un certain nombre de revisions.

La présente publication contient les plus récentes données pour les années 1960 et 1961. Des erreurs mineures peuvent encore subsister, mais comme les données ont été soumises à divers contrôles, les statistiques devraient être assez précises. Evidemment, une certaine marge d'erreur due au môde d'échantillonnage subsiste.

La Commission publie les statistiques d'origine et de destination pour répondre aux demandes émanant des pouvoirs publics, de l'industrie ou d'autres personnes ou institutions intéressées. La Commission sera heureuse de recevoir tout commentaire sur l'utilité d'une telle publication ainsi que toute suggestion de nature à en améliorer le contenu ou la présentation. De son côté, la Commission continuera ses efforts afin de fournir des statistiques à la fois précises et opportunes.

Le Secrétaire,
D. F. Quirt.

AIR TRANSPORT BOARD
COMMISSION DES TRANSPORTS AÉRIENS
CANADA

FOREWORD

In the Fall of 1959, the Domestic Passenger Origin and Destination Survey was converted from a sample of two week's traffic in March and September to a continuing systematic sample covering approximately 10% of passengers on high-volume routes and 20% on the remainder. The new survey was expected to greatly improve the reliability of annual estimates.

Statistics for the year 1960 were published in April, 1961. Since that time extensive analysis and investigation of 1960 figures has resulted in a number of revisions.

The current report presents the latest figures for both 1960 and 1961. While it is possible that minor errors still remain, the data have been subjected to various reliability tests and are considered to be reasonably accurate. The statistics, of course, will necessarily contain a certain margin of sampling error.

The Board publishes O & D Statistics in response to the many requests received from public authorities, the industry and other interested parties. Comments on the usefulness of the report along with suggestions for improvement are always welcome. At the same time, the Board will continue to make every effort to produce statistics which are both accurate and timely.

D.F. Quirt,
Secretary.

NOTES EXPLICATIVES

1. Le rassemblement des statistiques des points d'origine et de destination des passagers (trafic intérieur) s'effectue grâce à la collaboration des transporteurs canadiens à services à horaire fixe et des compagnies Nordair et Saskatchewan Government Airways. Le relevé du trafic à l'intérieur du Canada et entre le Canada et les Etats-Unis se limite aux routes principales. Les routes dites "principales" sont, règle générale, celles dont le service est d'une grande régularité et qui sont desservies par des aéronefs de Classe DC-3 ou de classe supérieure.

2. Les données présentées dans cette publication sont basées sur les billets de passage. Un échantillon de 10% est prélevé dans le cas de routes ayant un fort débit, dans les autres cas l'échantillon est de 20%. Les billets dont le numéro se termine par un "0" forment l'échantillon de 10%, celui de 20% comprend, en plus, les billets dont le numéro se termine par un "5". Afin d'éviter tout double emploi en demande aux transporteurs de ne prélever que le premier volet.

3. La compilation des statistiques d'origine et de destination est faite sur la base des voyages d'aller dans un seul sens. Les voyages d'aller et retour, les voyages circulaires ou les voyages en "fer à cheval" doivent être subdivisés en deux, chaque subdivision ayant une origine et une destination différente. Règle générale, la coupure de ces voyages se fait au point le plus éloigné du point d'origine. Les voyages effectués vers des points à l'extérieur des routes principales sont considérés comme se terminant au point où le passager laisse la route principale.

4. La présente publication est divisée en deux parties. La première porte sur le trafic intérieur (trafic entre deux points à l'intérieur du pays) et la deuxième sur le trafic transfrontalier (trafic entre le Canada et les Etats-Unis). Cette dernière partie se limite cependant aux voyages qui mettent en cause un transporteur canadien. On peut obtenir des statistiques complémentaires sur le transport effectué par des entreprises américaines ou conjointement par des entreprises canadiennes et américaines, en consultant les publications de l'Air Transport Association of America. Ces statistiques sont compilées à partir de données fournies par la Civil Aeronautics Board des Etats-Unis.

5. Pour connaître le trafic entre deux points quelconques on n'a qu'à consulter les statistiques pour l'un ou l'autre des points. Les données se trouvent dans la colonne portant le titre "de" ou "à" selon le cas. Par exemple, le trafic allant de Regina vers d'autres points est indiqué dans la colonne intitulée "de" et le trafic vers Regina venant d'autres points sous le titre "à".

EXPLANATORY NOTES

1. Domestic Origin and Destination statistics are collected through the co-operation of Canadian scheduled carriers along with Nordair and Saskatchewan Government Airways. The survey is confined to "mainline" traffic within Canada and to traffic between Canada and the United States. Routes designated as "mainline" are generally those with a considerable degree of regularity of service, and with aircraft in the DC3 class or larger.

2. The data summarized in this report are drawn from passenger tickets. A 10% sample is employed for high-volume routings and a 20% for all others. The 10% sample is based on tickets lifted which have a number ending in "0"; the 20% sample includes, as well, tickets ending in "5". To avoid duplication, carriers are instructed to report first coupons only.

3. Origin and Destination statistics are compiled on the basis of one-way, single-direction journeys. Round trips, circle trips, and "open-jaw" trips must therefore be broken into two journeys, each with a separate origin and destination. As a general rule, trips are broken at the furthest point from the origin. Trips to off-mainline points are reported as terminating at the station where the passenger leaves the mainline system.

4. The report presents statistics in two parts, the first dealing with Domestic Traffic (traffic between two points within Canada) and the second with Transborder Traffic, or traffic between Canada and the United States. The transborder statistics are confined, however, to trips involving only Canadian carrier participation. Complementary data on U.S. carriage and U.S.-Canadian mixed carriage are available from Air Transport Association of America publications compiled from data collected by the Civil Aeronautics Board in the United States.

5. In this report, traffic between any two stations may be ascertained through reference to the statistics for either station. Data are summarized in "From" and "To" columns. For example, traffic from Regina to all other points is shown in the "From" column and traffic into Regina from all other points, in the "To" column.

6. Les statistiques des points d'origine et des destination peuvent être utiles pour déterminer l'existence d'intérêts communs entre différents centres, et le volume approximatif du trafic émanant de points particuliers. Toutefois, les données ne doivent pas être considérées comme représentant le trafic total parce qu'il n'est pas tenu compte des arrêts effectués en cours de route dans le cas de voyages à destinations multiples. Par exemple, un voyage Montréal - Vancouver peut comprendre plusieurs visites en cours de route, dans un tel cas seulement le point initial d'origine et le point final de destination entrent en ligne de compte.

7. Certains facteurs tels que l'agrandissement ou l'amélioration des installations des aéroports et le développement ou l'abandon de services aériens viennent compliquer l'analyse des statistiques d'origine et de destination. L'annexe ci-après "Notes relatives aux stations" peut être d'un certain secours pour ce qui a trait aux données qui couvrent moins d'une année complète.

8. Les statistiques d'origine et de destination sont receuillies avec l'autorisation de la Commission des transports aériens. L'analyse de ces statistiques est faite par la Section de la statistique de la Direction de l'économie et des recherches et par le service de traitement des données du Ministère des transports.

Des copies de cette publication sont disponibles en quantité limitée. On peut en obtenir une copie en s'adressant au Secrétaire de la Commission des transports aériens, Ottawa.

6. Origin and Destination statistics are useful in determining the relative community of interest between different centres and the approximate volumes of traffic generated at individual points. The figures should not be considered representative of total traffic, however, as no recognition is given to stopovers on multiple-destination journeys. For example, a trip from Montreal to Vancouver may involve several visits along the way; only the initial origin and final destination are taken into account in the O & D statistics.

7. Year-to-year analysis of O & D statistics is complicated by such factors as extension or improvement of airport facilities, and the development or discontinuance of airline services. While it would be difficult to explain all factors influencing annual O & D totals, some assistance is provided in the "Station Footnotes" section which follows, particularly in regard to totals which cover less than a full year.

8. Origin and Destination Statistics are collected under the authority of the Air Transport Board, and are processed by the Statistics Section, Economic Policy and Research Branch and the Data Processing Unit of the Department of Transport.

A limited number of copies of this report are available on request to the Secretary, Air Transport Board, Ottawa.

NOTES EXPLICATIVES

1. Le rassemblement des statistiques des points d'origine et de destination des passagers (trafic intérieur) s'effectue grâce à la collaboration des transporteurs canadiens à services à horaire fixe et des compagnies Nordair, Saskair, et Eastern Provincial Airways. Le relevé du trafic à l'intérieur du Canada et entre le Canada et les Etats-Unis se limite aux routes principales. Les routes dites "principales" sont, règle générale, celles dont le service est d'une grande regularité et qui sont desservies par des aéronefs de Classe DC-3 ou de classe supérieure.

2. Les données présentées dans cette publication sont basées sur les billets de passage. Un échantillon de 10% est prélevé dans le cas de routes ayant un fort débit, dans les autres cas l'échantillon est de 20%. Les billets dont le numéro se termine par un "0" forment l'échantillon de 10%, celui de 20% comprend, en plus, les billets dont le numéro se termine par un "5". Afin d'éviter tout double emploi on demande aux transporteurs de ne prélever que le premier volet.

3. La compilation des statistiques d'origine et de destination est faite sur la base des voyages d'aller dans un seul sens. Les voyages d'aller et retour, les voyages circulaires ou les voyages en "fer à cheval" doivent être subdivisés en deux, chaque subdivision ayant une origine et une destination différente. Règle générale, la coupure de ces voyages se fait au point le plus éloigné du point d'origine. Les voyages effectués vers des points à l'extérieur des routes principales sont considérés comme se terminant au point où le passager laisse la route principale.

4. La présente publication est divisée en deux parties. La première porte sur le trafic intérieur (trafic entre deux points à l'intérieur du pays) et la deuxième sur le trafic transfrontalier (trafic entre le Canada et les Etats-Unis). Cette dernière partie se limite cependant aux voyages qui mettent en cause un transporteur canadien. On peut obtenir des statistiques complémentaires sur le transport effectué par des entreprises américaines ou conjointement par des entreprises canadiennes et américaines, en consultant les publications de l'Air Transport Association of America. Ces statistiques sont compilées à partir de données fournies par la Civil Aeronautics Board des Etats-Unis.

5. Pour connaître le trafic entre deux points quelconques on n'a qu'à consulter les statistiques pour l'un ou l'autre des points. Les données se trouvent dans la colonne portant le titre "de" ou "à" selon le cas. Par exemple, le trafic allant de Regina vers d'autres points est indiqué dans la colonne intitulée "de" et le trafic vers Regina venant d'autres points sous le titre "à".

EXPLANATORY NOTES

1. Domestic Origin and Destination statistics are collected through the co-operation of Canadian scheduled carriers along with Nordair, Saskair, and Eastern Provincial Airways. The survey is confined to "mainline" traffic within Canada and to traffic between Canada and the United States. Routes designated as "mainline" are generally those with a considerable degree of regularity of service, and with aircraft in the DC3 class or larger.

2. The data summarized in this report are drawn from passenger tickets. A 10% sample is employed for high-volume routings and a 20% for all others. The 10% sample is based on tickets lifted which have a number ending in "0"; the 20% sample includes, as well, tickets ending in "5". To avoid duplication, carriers are instructed to report first coupons only.

3. Origin and Destination statistics are compiled on the basis of one-way, single-direction journeys. Round trips, circle trips, and "open-jaw" trips must therefore be broken into two journeys, each with a separate origin and destination. As a general rule, trips are broken at the furthest point from the origin. Trips to off-mainline points are reported as terminating at the station where the passenger leaves the mainline system.

4. The report presents statistics in two parts, the first dealing with Domestic Traffic (traffic between two points within Canada) and the second with Transborder Traffic, or traffic between Canada and the United States. The transborder statistics are confined, however, to trips involving only Canadian carrier participation. Complementary data on U.S. carriage and U.S.-Canadian mixed carriage are available from Air Transport Association of America publications compiled from data collected by the Civil Aeronautics Board in the United States.

5. In this report, traffic between any two stations may be ascertained through reference to the statistics for either station. Data are summarized in "From" and "To" columns. For example, traffic from Regina to all other points is shown in the "From" column and traffic into Regina from all other points, in the "To" column.

6. Les statistiques des points d'origine et de destination peuvent être utiles pour déterminer l'existence d'intérêts communs entre différents centres, et le volume approximatif du trafic émanant de points particuliers. Toutefois, les données ne doivent pas être considérées comme représentant le trafic total parce qu'il n'est pas tenu compte des arrêts effectués en cours de route dans le cas de voyages à destinations multiples. Par exemple, un voyage Montréal - Vancouver peut comprendre plusieurs visites en cours de route, dans un tel cas seulement le point initial d'origine et le point final de destination entrent en ligne de compte.

7. Certains facteurs tels que l'agrandissement ou l'amélioration des installations des aéroports et le développement ou l'abandon de services aériens viennent compliquer l'analyse des statistiques d'origine et de destination. L'annexe ci-après "Notes relatives aux stations" peut être d'un certain secours pour ce qui a trait aux données qui couvrent moins d'une année complète.

8. Les statistiques d'origine et de destination sont recueillies avec l'autorisation de la Commission des transports aériens. L'analyse de ces statistiques est faite par la Section de la statistique de la Direction de l'économie et des recherches et par le service de traitement des données du Ministère des transports.

9. La Commission publie les statistiques d'origine et de destination pour répondre aux demandes émanant des pouvoirs publics, de l'industrie ou d'autres personnes ou institutions intéressées. La Commission sera heureuse de recevoir tout commentaire sur l'utilité d'une telle publication ainsi que toute suggestion de nature à en améliorer le contenu ou la présentation. De son côté, la Commission continuera ses efforts afin de fournir des statistiques à la fois précises et opportunes.

Des copies de cette publication sont disponibles en quantité limitée. On peut en obtenir une copie en s'adressant au Secrétaire de la Commission des transports aériens, Ottawa.

6. Origin and Destination statistics are useful in determining the relative community of interest between different centres and the approximate volumes of traffic generated at individual points. The figures should not be considered representative of total traffic, however, as no recognition is given to stopovers on multiple-destination journeys. For example, a trip from Montreal to Vancouver may involve several visits along the way; only the initial origin and final destination are taken into account in the O & D statistics.

7. Year-to-year analysis of O & D statistics is complicated by such factors as extension or improvement of airport facilities, and the development or discontinuance of airline services. While it would be difficult to explain all factors influencing annual O & D totals, some assistance is provided in the "Station Footnotes" section which follows, particularly in regard to totals which cover less than a full year.

8. Origin and Destination statistics are collected under the authority of the Air Transport Board, and are processed by the Statistics Section, Economic Policy and Research Branch and the Data Processing Unit of the Department of Transport.

9. The Board publishes O & D statistics in response to the many requests received from public authorities, the industry and other interested parties. Comments on the usefulness of the report along with suggestions for improvement are always welcome. At the same time, the Board will continue to make every effort to produce statistics which are both accurate and timely.

A limited number of copies of this report are available on request to the Secretary, Air Transport Board, Ottawa.

NOTES RELATIVES AUX STATIONS

Deer Lake, T.-N.	Trafic déclaré à partir du 1er avril 1962.
Hamilton/Mount Hope, Ont.	Service commencé le 1er avril 1962 et suspendu le 15 août 1962.
International Falls, Minn.	Service commencé le 15 mai 1961 et suspendu le 30 septembre 1962.
Kenora, Ont.	Service commencé le 3 juillet 1962 et suspendu le 30 septembre 1962.
Kingston, Ont.	Service commencé le 30 juin 1961 et suspendu le 15 août 1962.
Manicouagan, P.Q.	Service commencé le 3 avril 1961.
Matane, P.Q.	Service suspendu le 13 mars 1961.
Murray Bay/Charlevoix, P.Q.	Service du 15 juin 1962 au 30 septembre 1962.
Oshawa, Ont.	Service commencé le 1er octobre et suspendu le 1er juin 1962.
Peace River, C.-B.	Service suspendu du 12 mai au 30 juillet 1961.
Port Menier, P.Q.	Trafic déclaré pour le deuxième trimestre de 1961 seulement.
Prince Rupert, C.-B.	Service commencé le 15 août 1961; antérieurement assuré par Terrace, C.-B.
Resolute Bay, T. N.-O.	Service commencé le 1er juillet 1962.
Sarnia, Ont.	Service commencé en janvier 1961 et suspendu le 15 août 1962.
Terrace/Kitimat, C.-B.	Données comprenant le trafic de Prince-Rupert avant la mise en service de l'aéroport en août 1961.
Thompson, Man.	Service commencé le 24 mars 1961.
Tuktoyaktuk, T. N.-O.	Service commencé le 1er avril 1961.
Twin Falls, T.-N.	Trafic déclaré à partir du 1er avril 1962.

STATION FOOTNOTES

Deer Lake, Nfld.:	Traffic reported from April 1, 1962.
Hamilton/Mount Hope, Ont.:	Service began April 1, 1962; suspended August 15, 1962.
International Falls, Minn.:	Service began May 15, 1961; suspended September 30, 1962.
Kenora, Ont.:	Service began July 3, 1962; suspended September 30, 1962.
Kingston, Ont.:	Service began June 30, 1961; suspended August 15, 1962.
Manicouagan, P.Q.:	Service began April 3, 1961.
Matane, P.Q.:	Service suspended March 13, 1961.
Murray Bay/Charlevoix, P.Q.:	Service from June 15, 1962 to September 30, 1962.
Oshawa, Ont.:	Service began October 1, 1961; suspended June 1, 1962.
Peace River, B.C.:	Service suspended May 12 - July 30, 1961.
Port Menier, P.Q.:	Traffic reported in 2nd quarter of 1961 only.
Prince Rupert, B.C.:	Service began August 15, 1961; previously served through Terrace, B.C.
Resolute Bay, N.W.T.:	Service began July 1, 1962.
Sarnia, Ont.:	Service began in January, 1961; suspended August 15, 1962.
Terrace/Kitimat, B.C.:	Figures include Prince Rupert traffic prior to opening of Prince Rupert Airport in August, 1961.
Thompson, Man.:	Service began March 24, 1961.
Tuktoyaktuk, N.W.T.:	Service began April 1, 1961.
Twin Falls, Nfld.:	Traffic reported from April 1, 1962.
